

Technical Skills

- Strong: HTML5, CSS3, Bootstrap, Javascript, jQuery, PHP, MySQL, phpMyAdmin, Scrum, AngularJS, Node.js and Github
- Experienced: Regular Expressions, Firebase, Object Oriented Javascript, Object Oriented PHP, MongoDB, and SASS

Applications

MBoutique - A full e-commerce website dedicated to selling macarons.

- Applied **HTML5**, **CSS3**, **Bootstrap**, and **AngularJS** to create an appealing and simplistic design.
- Used **AngularJS** as the the front-end MVC to retrieve, manage, and keep track of shopping data on the client.
- **PHP** was used to interface with **MySQL** to retrieve the shopping inventory, add customer data, retrieve customer data, update customer data, and record purchases made by the customer. **PHP** was also used to implement a token authentication system for logins
- The website is hosted on an **Apache** server on an **Ubuntu (Linux)** virtual machine hosted by **AWS EC2 Cloud Computing** service.

Student Grade Table - An application for managing a database of students with their corresponding assignments and grades on a server.

- Utilized **AngularJS** to take the user's input and push it to **Firebase**. **Angular** was also used to update and delete data in the database.
- Used **AngularJS** to dynamically create the elements on the DOM and sort information on the DOM based on user choices.
- Applied **HTML5** and **Bootstrap** to build the skeleton and style for the online management tool.

Calculator - A fully functional calculator with a flat modern design, inspired by Google's Material Design philosophy.

- Applied **HTML5**, **CSS3**, and **Bootstrap Material Design** to create a flat, modern, and visually appealing design.
- Utilized **Javascript** and **AngularJS** to add functionality to the calculator, which includes basic, comprehensive, and advanced functionality. **Javascript** and **AngularJS** were also used to implement a currency and metric converter.

Password Manager - A simple localhost password management system powered by **Node.js**.

- Utilized **Node.js** and **ECMAScript 6** syntax to create a simple password management system with basic CRUD operations.
- Used the **crypto.js** module to encrypt and decrypt accounts, so the user's accounts will be secure but still readable for the user to use.
- Utilized the **yargs.js** module to allow the user to make their inputs and commands in the command line or terminal for ease of use.

Node.js Chat - A simple chat application powered by **Node.js**.

- Utilized **Node.js**, **Socket.io**, and **Express.js** to create a server and application to allow users to exchange messages with each other.
- Utilized **Socket.io** to allow users to create their own custom users, see when users join, see when users leave, and enter a custom command to see a full list of users within their respective chat room.
- Applied **HTML5** and **Bootstrap** to build the document skeleton and style for the chat application.

Experience
